

Less Switching. More Doing.

Illumination designed for common ear, nose and throat care in family practice, pediatrics, urgent care and emergency rooms – so clinicians can move from exam to action without changing light sources.

67%

of clinicians need more time for new patient visits

53%

of clinicians need more time for follow-ups

13-16

minutes is the average face-to-face time U.S. physicians spend with each patient

Cerumen Impaction Impacts

~10%
of children

~5%
of healthy adults

~4%
of primary care visits

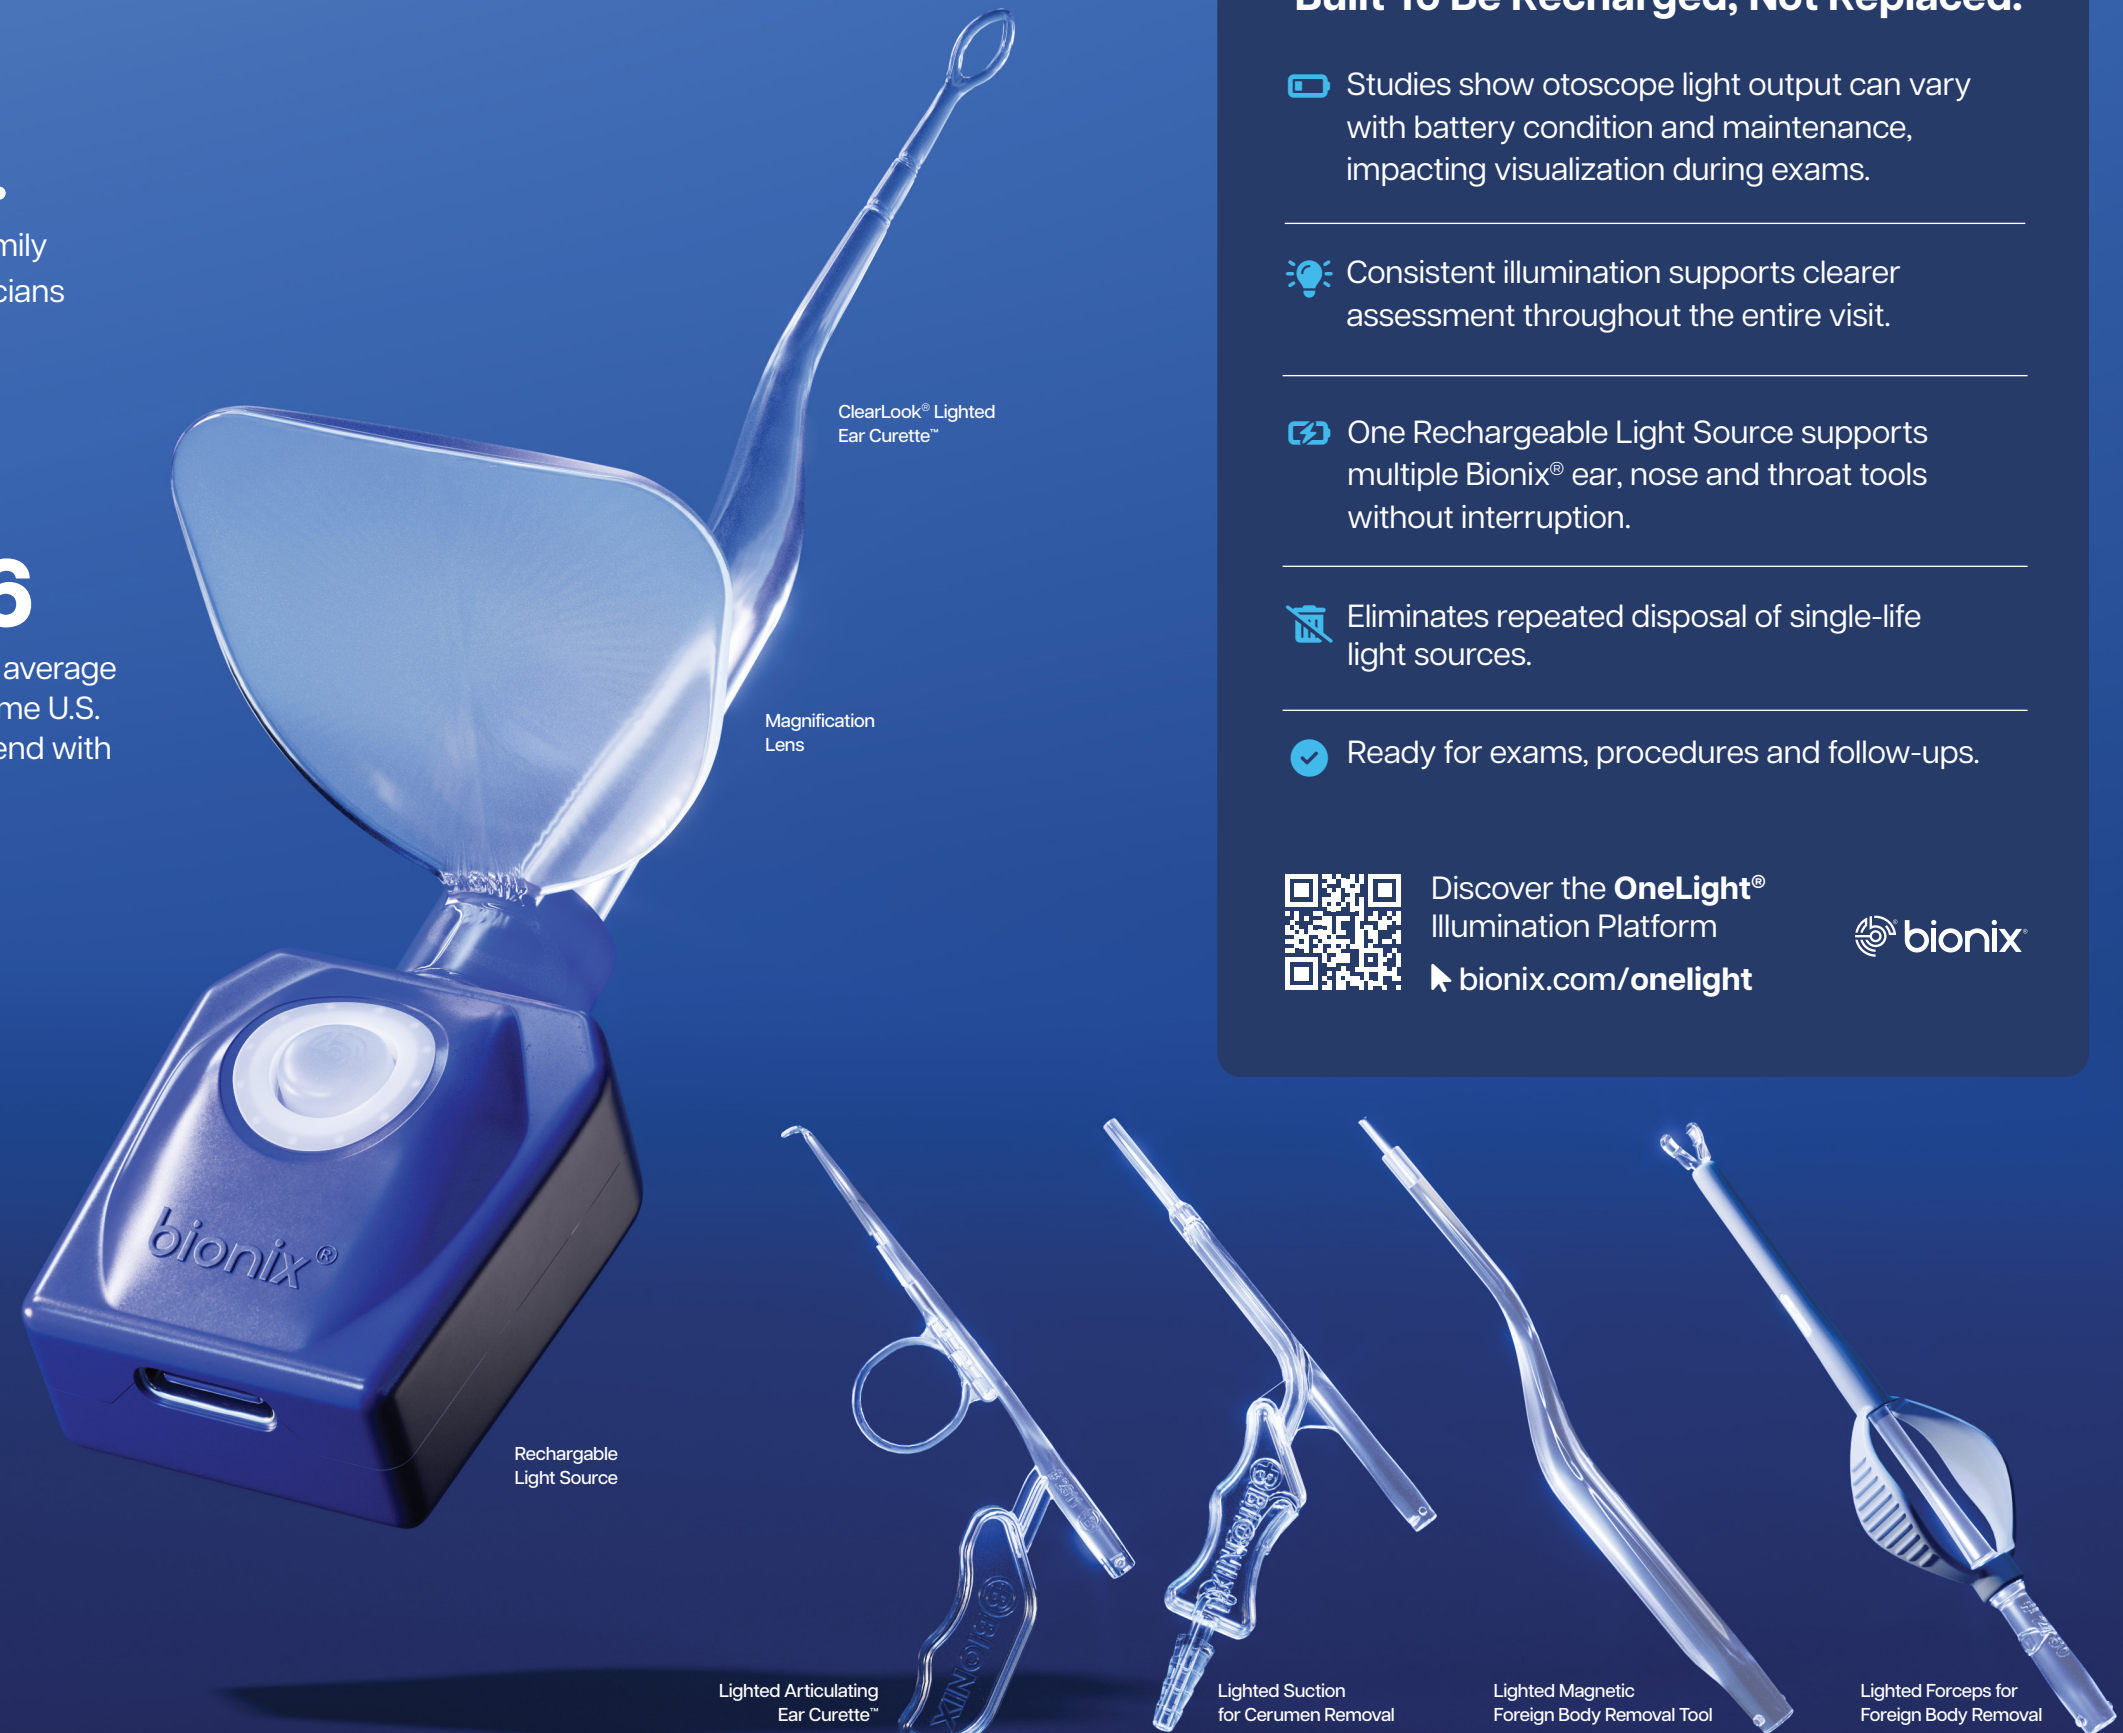

70,000+

pediatric emergency visits (2010-2019) involved battery injuries,

5.7%
nasal insertions

2.5%
ear insertions

Lighted Magnetic Foreign Body Removal Tool

Lighted Forceps for Foreign Body Removal

Built To Be Recharged, Not Replaced.

- Studies show otoscope light output can vary with battery condition and maintenance, impacting visualization during exams.
- Consistent illumination supports clearer assessment throughout the entire visit.
- One Rechargeable Light Source supports multiple Bionix® ear, nose and throat tools without interruption.
- Eliminates repeated disposal of single-life light sources.
- Ready for exams, procedures and follow-ups.
